I don't think so. Who would have sent them?

Do you have the language we used to respond to the Silverton proposal and/or the Boyd/Sparks proposal?

Rich suggests adding a question in case someone asks our reaction/response to those proposals, especially the Silverton proposal.

Oh, cripes, no! I've exceeded my multi-tasking capability!

Here is the new language for Nelson Tunnel.

Nelson Tunnel

1. What are the risks of a blowout at the Nelson Tunnel?

EPA always treats former mining sites as though they have blowout potential. The Nelson

Tunnel has been investigated extensively by DRMS, EPA, CDPHE and contractors, and we understand that the system of non-engineered blockages are currently stable. We will conduct a failure modes analysis of the Nelson Tunnel. We will also be procuring a replacement flowmeter to provide real-time data about potential changes in the tunnel and to allow the project team to alert downstream communities about potential changes to the tunnel stability. We will use the failure mode analysis results to inform us regarding any necessarily mitigation measures, such as a flow-control bulkhead.

Got it this time.

Does this include the one you said you wanted to get wording on? If so, which number was it so I can make sure I have the correct language.

If you don't have the language yet, just let me know what the question is and I'll color in yellow so I know additional language is coming.

Laura,

Please see my edits, suggestions and additions. I wouldn't forward the first set of questions to Nancy since they are discussion items for CDPHE.

Please see attached and let me know if anything needs to be revised/added.

After I get your feedback I'll route to Nancy for her review/approval/
